

"A GRANGER."

THE

BUFFALO AGRICULTURAL WORKS

(ESTABLISHED 1855.)

WM. L. DOYLE, Proprietor.

No. 140 PERRY STREET, BUFFALO, N. Y.

To

(One of the Farmers of the West.)

Will you sustain an effort to bring the manufacturer and consumer together without the intervention of the middlemen? To test the question this circular is issued, and your co-operation is solicited; and the offer is hereby made to you if you will write me that you approve of the effort, and will stand by me, I will sell you any implement made here, at *twenty-five per cent. off* from regular established prices.

Please write to me if acceptable, and add any suggestions that occur to you that might be mutually advantageous; also names and address of any farmers, near or far, who would be likely to be interested in it, and I will send copies of this circular to them.

Respectfully,

Wm L. Doyle.

THE BUFFALO AGRICULTURAL WORKS.

In connection with our Horse Power, which we guarantee competent to drive all kinds of Farming Machinery (or with any other Power at hand), we take pleasure in offering you a new

THRESHING-BOX AND SEPARATOR,

Arranged in an economical form, for the use of Farmers who prefer to do their own threshing.

THE CYLINDER IS ALL OF IRON

And with the concaves, teeth, boxes, &c., are exactly similar to those of the

CELEBRATED "PITTS THRESHERS,"

And are arranged in a short and stout frame to work overshot and from a rising feed table, so as to

PREVENT STONES, &c., REACHING THE TEETH,

And the grain and straw is delivered out on to an easily attached shaking separator ten feet long, from the end of which the straw is ready for the fodder-stack, and the grain and chaff is underneath the Separator ready for the Fanning Mill at any convenient time.

THE WHOLE MACHINE IS STRONGLY BUILT,

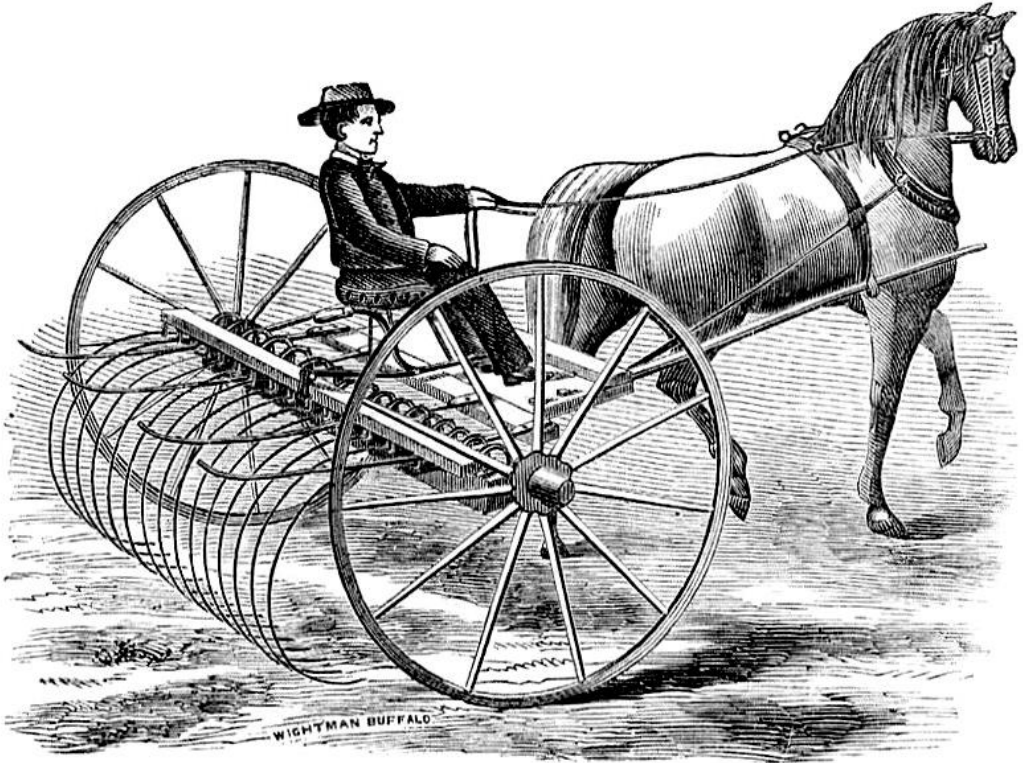

Iron lined, portable; can be compactly stowed away, and will be offered at a LOW PRICE and under a

"GUARANTEE OF SATISFACTION."

Those having limited barn room will readily see the advantages and saving in owning their own Thresher.

THE BUFFALO AGRICULTURAL WORKS.

THE BUFFALO LOCK-LEVER

SULKY HAY AND GRAIN RAKE

(HARDGROVE'S PATENT.)

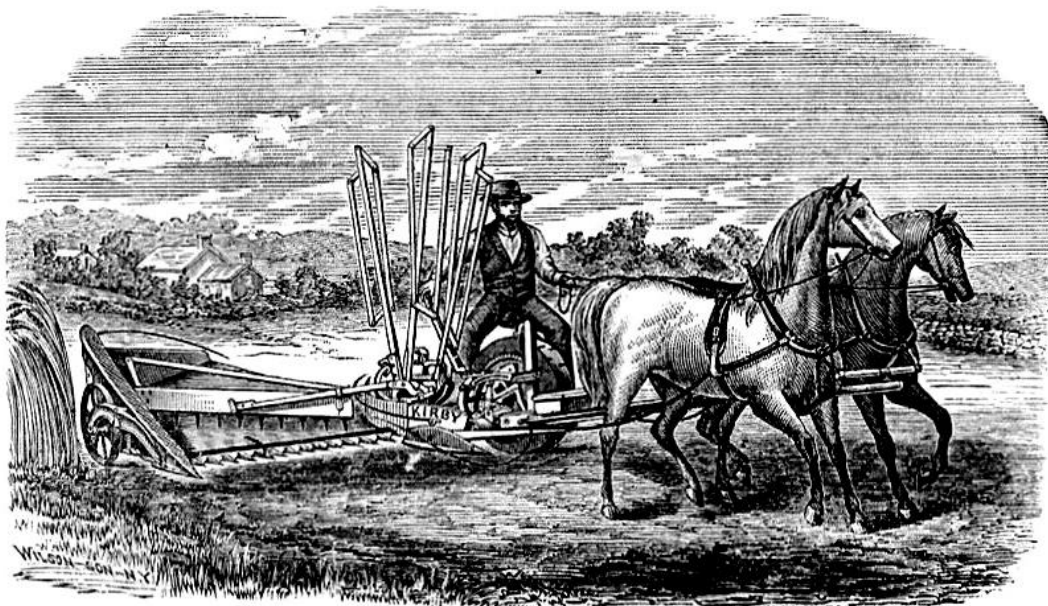

With nineteen of Hussey, Wells & Co.'s best steel teeth. Any boy or girl can run this rake as well as the best farmer. The Lock Lever holds the teeth to the work without the aid of hands or feet. Any tooth can be changed in a moment. The entire Rake is finished in a substantial manner, with seasoned wood and tempered steel. Decided improvements made in 1875 Rakes. Twenty acres raking per day ordinary work.

Several thousand of these Rakes have been made in this shop during the last few years, and they give general satisfaction for both raking and gleaning. I will warrant them to "fill the bill."

Teeth and other extras furnished.

THE BUFFALO AGRICULTURAL WORKS.

The "Kirby" American Harvester.

BUFFALO BUILT

MOWERS AND REAPERS.

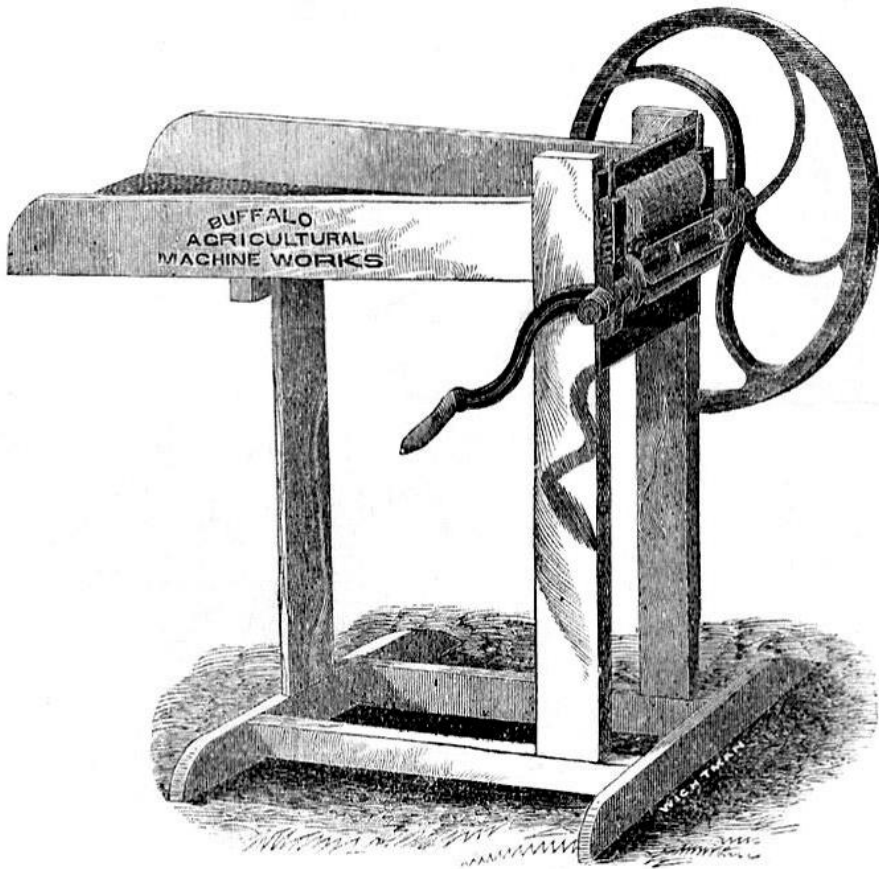

Ten Thousand of the above machines were built in this shop between 1857 and 1867, and nearly all of them are doing "good service" yet.

By order of D. M. OSBORNE & CO. I supply all extras and repairs, and I wish to know the address of every farmer who has one of the Buffalo Built Machines.

I also buy second-hand Mowers and Reapers, of all kinds; and after rebuilding will offer them for sale at low prices, and under guarantee of "good work."

THE BUFFALO AGRICULTURAL WORKS.

THE BUFFALO HIDE ROLL

HAY, CORNSTALKS AND STRAW CUTTER

The best Hay Cutter in the market to-day. A cylinder of knives, 6 to 14 in number, cuts the feed against a rawhide roller, thereby preserving the edge of the knives. The frame is of hard wood, making a strong, durable and efficient cutter.

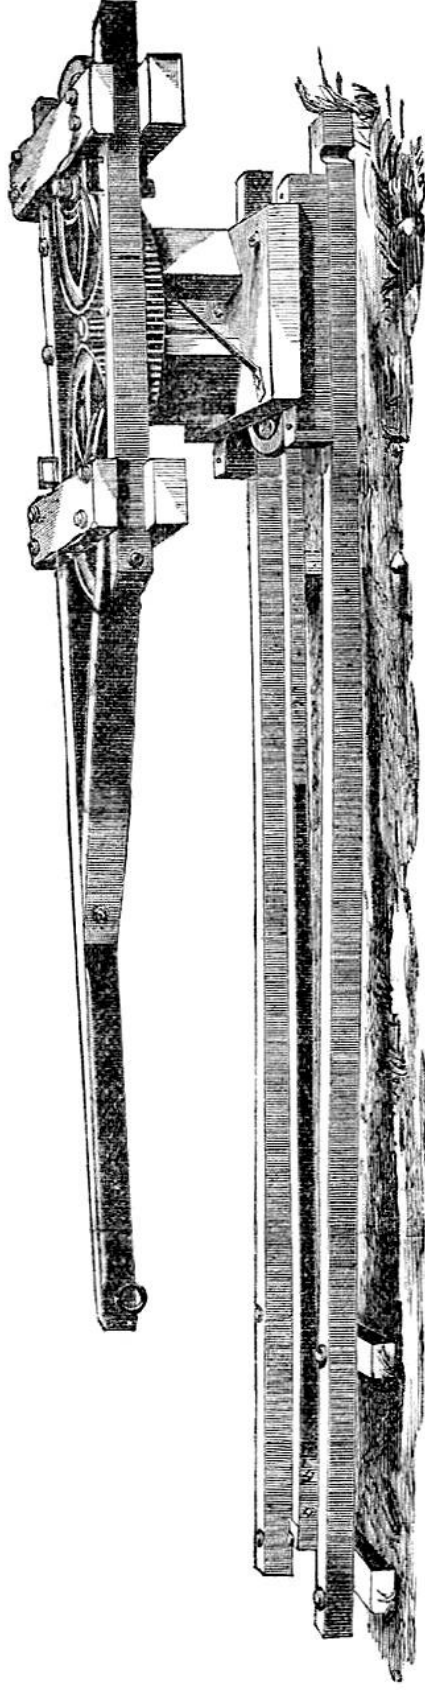

Prices, delivered on cars, from \$12.00 to \$20.00 for common sizes, and from \$20.00 to \$38.00 for large sizes, adapted for steam or horse power.

I also buy second-hand cutters of all makes, and after rebuilding, offer them for sale, in good order and at low prices. I can, therefore, supply almost any desired Feed Cutter; and if shipped, will warrant them to do good service.

THE BUFFALO HORSE POWER.

(TOMMAN'S PATENT.)

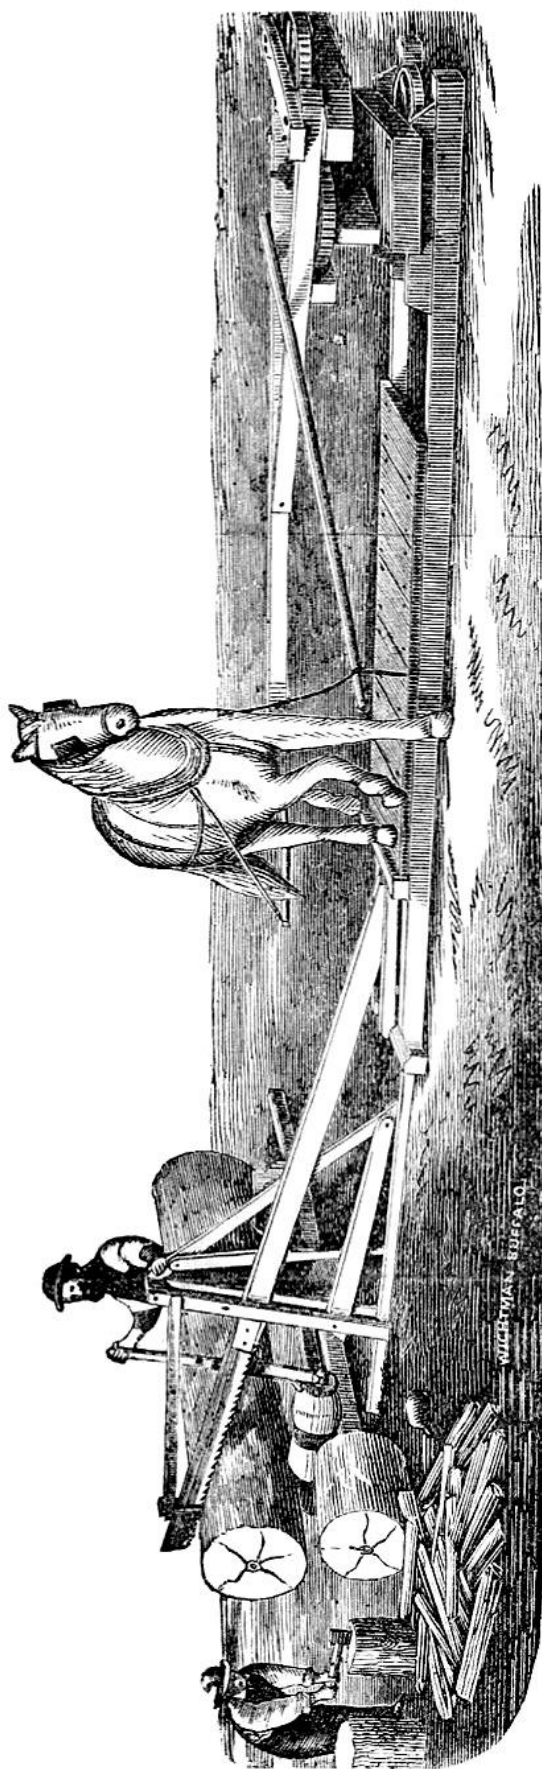

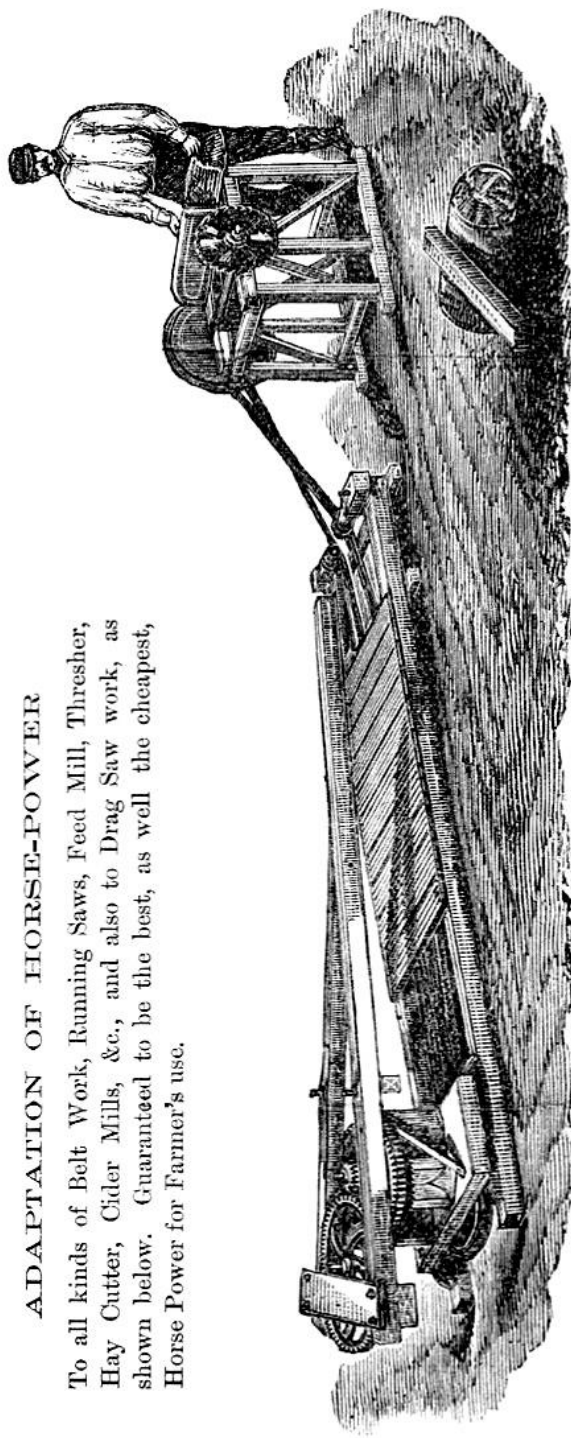

TWO SIZES.—First Size Double Geared and Double Sweeps, for 1, 2, 3 or 4 horses. Second Size Single Geared and Single Sweeps, for 1 or 2 horses.

I make a "specialty" of the first size complete with only half sills and half sweeps, thereby saving more than one-third in cost and freightage, and Farmers can easily attach their own short sweeps for barn floor, or long sweeps and sills for out-door work. All Powers are built of 5 inch maple, and geared 50 revolutions to one of the sweep. They are now all set on cast iron spider frames and are "all ready" for Threshing, Cider Mill, Feed Cutting or Grinding, Circular Saw or Drag Saw work. Many thousands are in use satisfactorily.

ADAPTATION OF HORSE-POWER

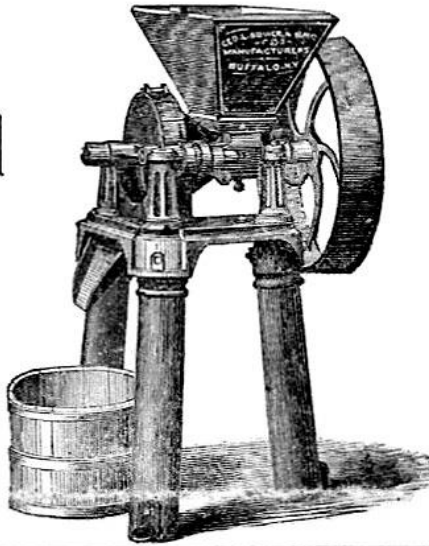

To all kinds of Belt Work, Running Saws, Feed Mill, Thresher, Hay Cutter, Cider Mills, &c., and also to Drag Saw work, as shown below. Guaranteed to be the best, as well the cheapest, Horse Power for Farmer's use.

THE AMERICAN
Corn and Feed
MILL.

Grinds the Corn into round meal (like Burr stones) by chilled iron grinders.

Adapted to power or hand

I also make a superior
WAGON JACK,
FANNING MILL,
AND
CULTIVATOR

And will add almost any desired implement to the list here given.

TO THE POSTMASTER:
WILL YOU PLEASE DELIVER THIS TO
One of your **PROMINENT FARMERS** in

POSTED: FEBRUARY 2, 2019

*EDITOR: BRIAN D. SZAFRANSKI
ELMA NEW YORK USA*

*NO REPUBLICATION OR REPRINTING
OF ANY FORM IS ALLOWED FOR
COMMERCIAL GAIN.*

Extras furnished to all the above machines. In ordering, please give all necessary particulars. Correspondence solicited.

EVERY MACHINE FULLY WARRANTED.

In case I do not receive a reply from this circular, I will understand that you do not approve of my attempt to bring the manufacturer and the consumer together, and that the offer made on the first page is "off."
